

Temperature@lert USB Edition

Reliable USB temperature monitoring to protect your company's valuable property, materials and assets from HVAC or refrigeration failure

Overview

Temperature@lert USB Edition is an easy to install, easy to use temperature monitoring notification device that can be used for remote, critical, and valuable product protection.

How it works

Temperature@lert USB Edition monitors the ambient air temperature in server rooms, phone closets, network cabinets, computer rooms and data centers. Temperature@lert USB Edition can be located away from the host PC using any standard USB extension cable. Temperature@lert USB Edition will help protect valuable IT equipment by providing you with an early warning of temperature problems. It is the low-cost, high-performance choice of IT professionals worldwide.

Cost Effective

You may choose to integrate this device with other Temperature@lert products through our web temperature monitoring interface for a low monthly fee. Otherwise, this device automatically creates temperature logs in MS SQL CE for easy integration into other applications.

Features & Benefits:

- Email alerts when the temperature goes out of your acceptable range – allows you to take timely corrective action
- Optional PC Shutdown protection, just in case your hardware heats up
- Communicate with pre-installed SNMP agents and networks
- Data logging of temperature history and current conditions – allows retrieval of data for analysis and troubleshooting
- Alerts you if the temperature returns to your acceptable range – puts your mind at ease when the problem has been corrected
- Supports SMTP Authentication
- Optional status email provides you with current temperature readings

Each USB Edition Includes

- USB powered device
- Temperature logging software
- SNMP capabilities
- 1 year technical support
- 1 year hardware warranty
- 30-day money back guarantee

Specifications
